FLAMER®

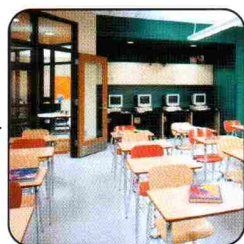

The new range of fire-retardant coatings with the best aesthetic performances

The ILVA Polimeri laboratories present FLAMER®, a range of fire-retardant products for wood, that guarantee the maximum fire protection, directly certified by the Italian Ministry. The range FLAMER® passed the tests provided by the law, obtaining the "CLASS 1" approval according to the CNVVF/Uni 9796 Italian norm regarding fire reaction.

The FLAMER® coating cycles perform comparably with traditional polyurethane ones. They are suitable for the finishing of furniture elements for hotels, cinemas, theatres, hospitals, schools, show-room and fairs.

Beyond fire-retardant properties, FLAMER® has been optimized to assure:

- **best aesthetic performances**
- **maximum chemical-physical resistance**
- **high productivity**
